

# Cold Rolling Line

## Parameters:CRL-2M

|                       |                  |                           |          |                               |                |
|-----------------------|------------------|---------------------------|----------|-------------------------------|----------------|
| Loading capacity      | 3000KG           | Input                     | 5.5-14mm | Inner diameter of output coil | 630 mm         |
| Output bar diameter   | 5-13mm           | Max weight of output coil | 2.5T     | Roller size                   | 125x82x15/20mm |
| Total installed power | 280KW            | Maximum speed             | 360m/min | Size                          | 31×3×6.8m      |
| Rolling part material | Tungsten carbide |                           |          |                               |                |
